TECHNICAL SKILLS

Programming Languages

- Python, C, C++, Java

Web Technologies

- HTML5, CSS3, JavaScript
- Django, Node.js

Databases

- MySQL, SQLite, PostgreSQL, MongoDB

AI & Machine Learning

- NumPy, Pandas, TensorFlow, PyTorch
- Computer Vision, Deep Learning
- Natural Language Processing

Tools & Platforms

- Git, GitHub, VS Code, Linux
- Jupyter Notebook

OTHER SKILLS

- Full-Stack Web Development
- Software Development
- Machine Learning & Deep Learning
- Computer Vision & NLP
- Database Design & Management
- Robotics & Embedded Systems
- IoT Development
- Git & Version Control

LANGUAGES

- Bengali (Native)
- English (Working Proficiency)

INTERESTS

- AI & Machine Learning Research
- Computer Vision & NLP
- Web & Software Development
- Robotics & IoT

PROFILE

Computer Science and Engineering student and software developer with experience in full-stack web development, database systems, machine learning, computer vision, and IoT. Skilled in Python, C, C++, Java, JavaScript, Django, Node.js, SQL, PyTorch, TensorFlow, and modern development tools. Experienced in developing practical software systems, building machine learning solutions, and conducting research in Bangla NLP, computer vision, federated learning, and multi-modal AI. Interested in software engineering, AI/ML, and research-driven development.

PROJECTS

Updated PTS – Student Job Search Platform (Django, Python)

[GitHub](#)

A Django-powered job-search platform developed especially for students, providing a practical web-based solution for discovering employment opportunities.

Sohoj Biniyog – SME Investment Platform (Django, Python, SQLite)

[GitHub](#)

A halal SME crowdfunding and investment platform designed to connect business owners with potential investors.

Microcontroller Projects – IoT & Embedded Systems (C++, Arduino, ESP32)

[GitHub](#)

Hands-on embedded and IoT projects involving ESP32, ESP8266, Arduino, sensors, automation, and microcontroller-based systems.

AYPMS – Agriculture Yield Prediction Management System (SQL, T-SQL)

[GitHub](#)

A database project containing schemas, datasets, and query resources for an agriculture yield prediction management system.

RESEARCH EXPERIENCE

BanglaAccentO – Bangla Regional Dialect Speech Recognition — University of Asia Pacific 2026 – Ongoing

Developing an end-to-end speech-to-speech communication system for Bangla regional dialects using curated dialectal speech data, with a focus on recognition, processing, and generation across regional accents.

Visual Grounding Repair for Multimodal Large Language Models — University of Asia Pacific 2026 – Ongoing

Proposing a computer vision research framework to detect, diagnose, and correct grounding hallucinations in multimodal large language models. The work investigates visual-reference verification and repair for improving the reliability of multimodal reasoning.

Federated Learning: A Privacy-Preserving Approach in AI — University of Asia Pacific 2025

Reviewed federated learning techniques for privacy-preserving AI, including decentralized training, secure aggregation, differential privacy, homomorphic encryption, and secure multi-party computation.

Solar-Powered Smart Irrigation System with IoT — University of Asia Pacific 2025

Developed a smart irrigation concept using dual-axis solar tracking, ESP32 IoT connectivity, capacitive soil-moisture sensing, and automated watering to improve irrigation efficiency.

EDUCATION

B.Sc. in Computer Science & Engineering

2022 – Present

University of Asia Pacific, Dhaka

Expected Graduation: 2026

CGPA: 3.54

Higher Secondary Certificate (HSC)

2021

Dhaka City College

GPA: 5.00
